

DANDELION (HEMISPHERE) PF 6400 SERIES HEMISPHERE EFFECT NOZZLES

DESIGN / APPLICATION DATA:

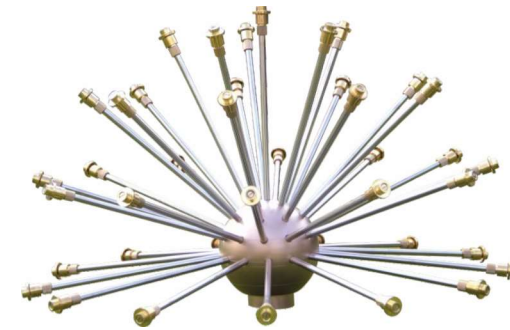

The Dandelion Hemisphere effect is created by multiple discs of water radiating from a center manifold. These effects produce a fine spray that results in evaporation cooling in the area of the effect. When not in use as a water feature, the dandelion hemisphere appears as a sculpture ideal for mall and garden areas.

SPECIFICATION DATA:

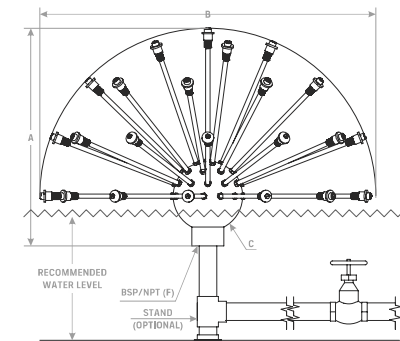

Material of construction is cast bronze and precision machined brass.
Nozzles are easily cleaned individually adjustable (for water thickness) and removable.

OPERATING DATA:

Noise : Good
Visibility : Excellent
Splash/Mist : Excellent
Wind Stability : Poor
Aeration Quality : Good

PF 6400 Hemisphere Effect
